NOTES:
 2007 -- Eggs laid by 2 females at the CA West End nest are counted as 2 clutches.
 2008 -- Includes 2 clutches laid at the VA Norfolk Botanical Gardens nest.
 2014 -- Includes 2 clutches laid at the CA Sauces Canyon nest.
 2015 -- Includes 2 clutches laid at the IA Davenport nest.
 2017 -- Includes 2 clutches each at the CA Sauces Canyon, CA Redding Turtle Bay, and PA Pittsburgh Hays nests. 8 eggs were laid at the CA Sauces Canyon nest, 1st clutch of 5 eggs, 2nd clutch of 3 eggs. All had thin shells and collapsed. At the PA Pittsburgh Hays nest, clutch 1 had one egg which was lost 2 days after laying when the nest tree fell; the eagles built a new nest and laid another egg 7 days after the first egg was lost; it is unknown whether they laid another egg inbetween, but the interruption of egg-laying and the 9-day interval between known eggs suggest a new clutch.
 2018 -- Includes 2 clutches laid at the IA Decorah North nest.
 2019 -- Includes 2 clutches laid at the AZ Fish & Game nest.
 2020 -- Includes 2 clutches laid at the AZ Fish & Game, CA Sauces Canyon, and CA West End nests, and 2 broods of eaglets at the FL Southwest nest. The FL brood 2 came after the loss of the only eaglet from brood 1 (as opposed to lost eggs), a rare occurrence among Bald Eagles. Brood 2 resulted in 2 successful fledges.
